

## **Website of the Month: Are Your Passwords in the Green?**

*We all know how vital it is to use strong passwords online, but for a sobering look at just how quickly the “average” cybercriminal can hack any that aren’t up to scratch, go to Hive Systems’ article “Are your passwords in the Green?” [Click here](#)*

*Their “Time it takes a hacker to brute force your password in 2022” infographic provides a strong visualization of the weakness and strength of various lengths and types of passwords. Also read the warnings and infographic in the section halfway down the article “What about the elephant in the room; what if my password has been previously stolen, uses simple words, or I reuse it between sites?”*

*Essential knowledge in these days of soaring online crime!*

Kind regards

P.S. My passwords will now all be 11 c#arAct3r5 long 😊
